

Second iteration

20th May 2006

Date: 06.02-2006

Participants: André Lindhjem, Kjetil Holien, Terje Risa, Øyvind Nerbråten

Last iteration: We managed to get audio playback to partially work. We have encountered some critical problems with the GStreamer library/Ruby wrapper. Seeking in audio playback does not work according to the wrapper API. The XML parsing in Ruby works nicely, but might be too slow. We managed to make a Debian package and our first release.

Current iteration: Our goals this iteration:

- Do some testing with GStreamer in C to investigate the problems.
- Find alternative audio libraries.
- Define and create a class API for audio playback.
- Try to improve the XML parsing speed.
- Get the documentation up to speed.
- Implement parsing for Daisy 2.02 standard in addition to the current standard.
