

# Fifth iteration

20th May 2006

**Date:** 20.03-2006

**Participants:** André Lindhjem, Kjetil Holien, Terje Risa, Øyvind Nerbråten

**Last iteration:** We have managed to create threads to control the playback. We have worked with the parser, but has discovered a problem and are not sure how to solve this. We do not seem to find a solution to this problem in the standard. Since we prioritize MP3, the implementations of other audio formats has been set on hold. The report are more up to date now.

**Current iteration:** Our goals this iteration:

- Try to find a solution to our parser problem.
- We shall work on a interface for the engine.
- We shall do some research on how we can implement a web browser front end.
- Continue work on the report.
