

Final phase

20th May 2006

Date: 03.24-2006

Participants: André Lindhjem, Kjetil Holien, Terje Risa, Øyvind Nerbråten

Last iteration: We have created two front ends for our engine, one console and one GUI. They work as examples on how to use the engine. The GUI is made in Qt 3. We have removed some bugs and the global variables in the library. We have implementing bookmarking and chapter navigation. Due to the lack of time we did not look into automake and autoconf.

Current iteration: Our goals this iteration:

- Continue work on the project report.
